

login:
To use the app, an user has to login.
The login fails if the user doesn't
exist in LDAP or in the database.
In this case the user has to register.

logout:
To stop the session the user
can logout from the system.

The main function of the app is
to find an item in a shelf.
To make it easier to find the item
the position of the item in the shelf
lights up.

Workflow:
get all labels: At first the user gets all labels to select required labels.
find item: The user finds the item with the selected labels.
turn on light: To make it easier to find the item. The position of the item lights up.
turn off light: When the duration time is past or the user wants to turn off the light, the LED is turned off.
